Future Outlook & Operational Developments

- The textile industry is currently facing significant challenges, with both global and domestic markets experiencing slowdowns. Reduced demand from the value-added textile industry is likely to affect sales volumes. Increased costs across various areas such as wages, administration, packaging and transportation are negatively impacting profit margins. As a result, the outlook of the current financial year seems to be negative. Nevertheless, management is actively pursuing strategies to maintain profitability through stringent cost management, proactive marketing and producing a variety of products.
- The Company has installed some portion of solar system at the Mills premises and plan to increase it in future to reduce the energy cost. With this installation, we expect that it would increase the efficiency that will contribute to profitability.
